

Projects within EU Framework Programmes

REDNEX – Innovative and Practical Management Approaches to Reduce Nitrogen Excretion by Ruminants

Project coordinator for APRC Nitra: Ing. Mária Chrenková, PhD.

The objective of the project is innovation and practical management of approaches to reduce nitrogen excretion by ruminants.

Optimising and standardising non-destructive imaging and spectroscopic methods to improve the determination of body composition and meat quality in farm animals

Project coordinator for APRC Nitra: Ing. Peter Polák, PhD.

The project is intended mainly for support of workshops and conferences organized on this subject, and for support of experience exchange during meetings, short or longer study stays.

Rabbit Genome Biology net (A Collaborative European Network on Rabbit Genome Biology)

Project coordinator for APRC Nitra: Prof. Ing. Peter Chrenek, DSc.

The project is aimed at mobility – conferences to present current projects and results from the research, in which is the rabbit used as biological model.
